

SPCR – SILENT PC REVIEW EXCERPTS 10-12-09...StoneWave Productions Pro Studio i7 ..."The PSi7 is promoted not only as a powerful platform for audio recording, but also for being Energy Star approved, eco-friendly and extremely quiet..."

"The serious look and feel of the Pro Studio i7 continues throughout the product. Opening up the Pro Studio i7 sample shows tidy assembly and wiring, and high quality parts".

- [StoneWave Pro Studio i7 Workstation PC, recorded from 1m distance](#) ...Idle at 17 dBA, at full load, at 23 dBA.

There are no other PC systems we've tested recently which could be considered competitive with the PSi7.

CONCLUSIONS:

- "The StoneWave Pro Studio i7 sample reviewed here is indeed a very quiet computer. Given that the recording mode of any audio software is far less taxing than our lab stress test utilities, it is quiet enough to be in the same acoustic space where almost any type of music is recorded. Its noise footprint is small, and the character of that noise is smooth enough that the quietest notes of the music would surely render it completely inaudible. The build quality is very good, and the choice of components is intelligent and appropriate."

Our thanks to [StoneWave Productions](#) for the review opportunity.
